**Silkscreen print  
Textile printing**

Silkscreen printing is a procedure in which paint is pushed through a screen with a scraper. A photochemical process lets the screen become non-permeable in certain areas to guarantee the desired effect. When using coloured logos it is wise to add a white base coat to ensure brilliant colours. This method can only be done on a flat surface or on anything that can be spread out horizontally such as textiles or segments of umbrellas.

**Tampon print**

A template of the logo is made and filled with the desired colour of ink. Once this is done the template is transferred onto the article with a silicone pad. These pads come in a variety of shapes and sizes which ensures a transfer onto nearly every surface, including uneven surfaces.

**Laser engraving**

A method using a laser beam to engrave a logo into nearly any material. A computer controlled process ensures a pinpoint reproduction. The final result is always dependant on the material surface. A colour replica is not possible.

**Embroidery**

A digitally controlled process in which a computer steers a needle and thread to embroider a surface. As many as 10 colours can be used in one embroidery procedure. This robust form of refinement can be used on all textiles. The logo must be provided in order to perform a cost calculation where the number of stitches are used.

**Embossing**

A stamp is used to press a logo into the surface of an article. By using a coloured foil it is possible to make coloured imprints. This technique is mostly used on leather and synthetic leather products.

**Transfer print**

The logo is printed on thermal paper and is then transmitted onto the artikel by ironing. Advantage: The logo is sharp and the colours will not run. This method is perfect for textiles and umbrellas.

**Etching**

An electrolytic process – a piece of felt is soaked in corrosive liquid and is pressed through a stencil onto the product. Once the liquid comes into contact with the article the desired imprint is etched into the surface. The advantage is that the imprint is very robust.

**Doming**

The doming sticker is made of synthetic resin and a sticker with a company logo. The clear resin is fitted precisely to the logo print, protects the print and gives the logo a 3D effect. The convex sticker is perfect for advertising on rough or hard materials, such as umbrella knobs.

## SUN & RAIN

**Don't be under the weather!**

Even though I sometimes enjoy singing in the rain and sunbathing as well, I always carry an umbrella with me. I wouldn't want to show up at a customer's office drenched! A parasol will keep my whole family from getting a sunburn.

## Brilliant performance Shown in the best light!

Let it shine. Our LED lights do not only look good, in terms of light output they are really small power packs. Reading light, solar lantern or flashlight ensure optimum illumination, wherever it is needed. The LEDs make it possible. In contrast to the light bulbs they are also much less sensitive to vibrations.

We from PiCOWORLD are specialised in bringing good things to light. You and your clients will be absolutely thrilled by the multifunctional picolux ideas!
